Dr. Jibril Tahir Amano

Medical Doctor · Medical AI Expert & Evaluation Task Author

Addis Ababa, Ethiopia · +251 948 919 135 · jibriltahir2232@gmail.com · linkedin.com/in/jibril-amano-005632306 · github.com/jibril223

SUMMARY

Physician with two years of experience as a domain expert for AI training and evaluation — scoring model outputs, annotating medical data, and authoring research-grade benchmark tasks with Python reference solutions. Trained at Addis Ababa University with a full clinical internship at Tikur Anbessa Specialized Hospital. Writes Python for data analysis and simulation.

AI TRAINING & EVALUATION EXPERIENCE

Scientific Computing Research Expert — Life Sciences & Medicine AfterQuery · Remote · Contract · 2026 – present

- Author PhD- or Master's-level, research-grade evaluation tasks for frontier AI models across biology, epidemiology, neuroscience, and medicine, built from my own computational work (cohort simulation, model calibration, data analysis) so the difficulty comes from the science itself rather than withheld information.
- Package each task in Harbor format: a main problem with connected subproblems, a Python reference solution, and pytest tests that verify the result.
- Specify the metrics a strong solution must meet without publishing passing thresholds; calibrate difficulty against model probes and revise on structured reviewer feedback until approved.

Medical Domain Expert Mindrift AI · Remote · 2024 – 2026

- Reviewed and scored large language model responses to medical questions for clinical accuracy, reasoning quality, and safety, with structured feedback grounded in evidence-based medicine.
- Annotated and quality-checked medical content for training, evaluation, and fine-tuning datasets.

Medical AI Data Quality Assessor Contract · Remote · 2025

- Evaluated clinical photographs for a medical AI training dataset against formal quality guidelines across wound, skin, and eye triage domains.

COMPUTATIONAL PROJECT

Cohort simulation of iron–folic acid adherence in pregnancy (Python) github.com/jibril223/ifa-cohort-sim · 2026

- Discrete-time cohort model (NumPy, SciPy) with competing causes of discontinuation and a knowledge-gap subgroup, calibrated by root-finding to the 44% non-adherence observed in my own survey; tablets taken feed a dose–response for anaemia at term.
- Compared four antenatal-care interventions with Monte Carlo cohorts, a parameter heatmap and a tornado sensitivity analysis; 14 pytest tests cover calibration, monotonicity, and stochastic–deterministic agreement.

CLINICAL EXPERIENCE

Medical Intern Tikur Anbessa Specialized Hospital · Addis Ababa · 2025 – 2026

- Rotated through internal medicine, surgery, pediatrics, obstetrics & gynecology, and emergency medicine, admitting and managing patients under supervision: history and examination, differential diagnosis, ordering and interpreting lab and imaging results, writing progress notes, and presenting cases on ward rounds.
- Covered overnight duty and managed acute presentations in the emergency department; performed routine procedures, assisted in surgery, conducted deliveries, and counselled patients and families on diagnosis and discharge plans.

EDUCATION & RESEARCH

Doctor of Medicine (MD), graduated with great distinction Addis Ababa University · 2018 – 2026

- Preclinical coursework in systems biology, structural biology, and neuroscience, alongside physiology, biochemistry, and pharmacology.
- Research (2024, co-investigator): *Iron and folic acid supplementation adherence among pregnant women attending antenatal care, Teklehaymanot Health Center, Addis Ababa*. Cross-sectional study, n = 134; sample size calculation, systematic sampling, questionnaire design, data collection and analysis. Found 56% adherence, driven mainly by side effects and knowledge gaps.

SKILLS

Programming & data: Python (pandas, NumPy, SciPy, matplotlib), SQL, JSON, Git/GitHub, Jupyter, pytest

Methods: epidemiological study design, descriptive and inferential statistics, cohort simulation and model calibration, data cleaning and analysis pipelines

AI evaluation: benchmark task design, rubric-based review, model output scoring, data annotation

Medical domains: clinical medicine, physiology, pharmacology, public health, genetics

Languages: English (fluent), Amharic (fluent) · **Certifications:** Basic Life Support · Infection Prevention & Control · Research Ethics

Volunteering: Deborah Foundation, Addis Ababa — supported children with Down syndrome and other developmental disabilities.
